Problem Statement

News explains the “What”, but ignores the “So what.”

Critical decision-makers founders, investors, MSMEs are **flying blind** to the hidden ripple effects that actually break markets and burn capital. By the time consequences are visible in the news, your window to act is already gone.

But why is there a need?

Let's understand this with real life situations!

Situation 1 — The Founder who didn't see it coming

RBI hikes interest rates. A SaaS founder keeps burning runway as usual. 3 months later VC funding dries up, debt costs spike, and cloud costs jump because the dollar strengthened. He read the news. He just didn't know what it meant for him.

Situation 2 — The MSME owner who missed ₹40L

Government launches a new PLI scheme for textile manufacturers. It's buried in a 200-page gazette notification. An MSME owner in Surat who qualified never found out. A competitor did.

Situation 3 — The Investor who reacted too late

Silicon Valley Bank collapses. Panic spreads globally. An investor waits for "more clarity" from news channels. By the time clarity came, the opportunity window had already closed.

Stat

73% of MSMEs don't know about schemes they qualify for

\$9 Trillion lost globally due to poor economic decision-making

4.7 Crore MSMEs in India flying blind on policy changes

3–5 days average time investors take to react to macro signals

Only 12% of news readers understand policy impact on finances

63 Million small businesses missed COVID relief schemes

₹2.5 Lakh Crore worth of govt schemes go underutilized annually

1 in 3 startups cite "wrong market timing" as reason for failure

What it means

Thousands of crores in unclaimed benefits every year

Every. Single. Year.

That's nearly the population of Spain

By then, the smart money has already moved

88% are just consuming noise

Information never reached them in time

Not because they don't exist — because nobody knows

Timing is just consequence awareness you didn't have

The Solution?

The Solution is **MarketMind**

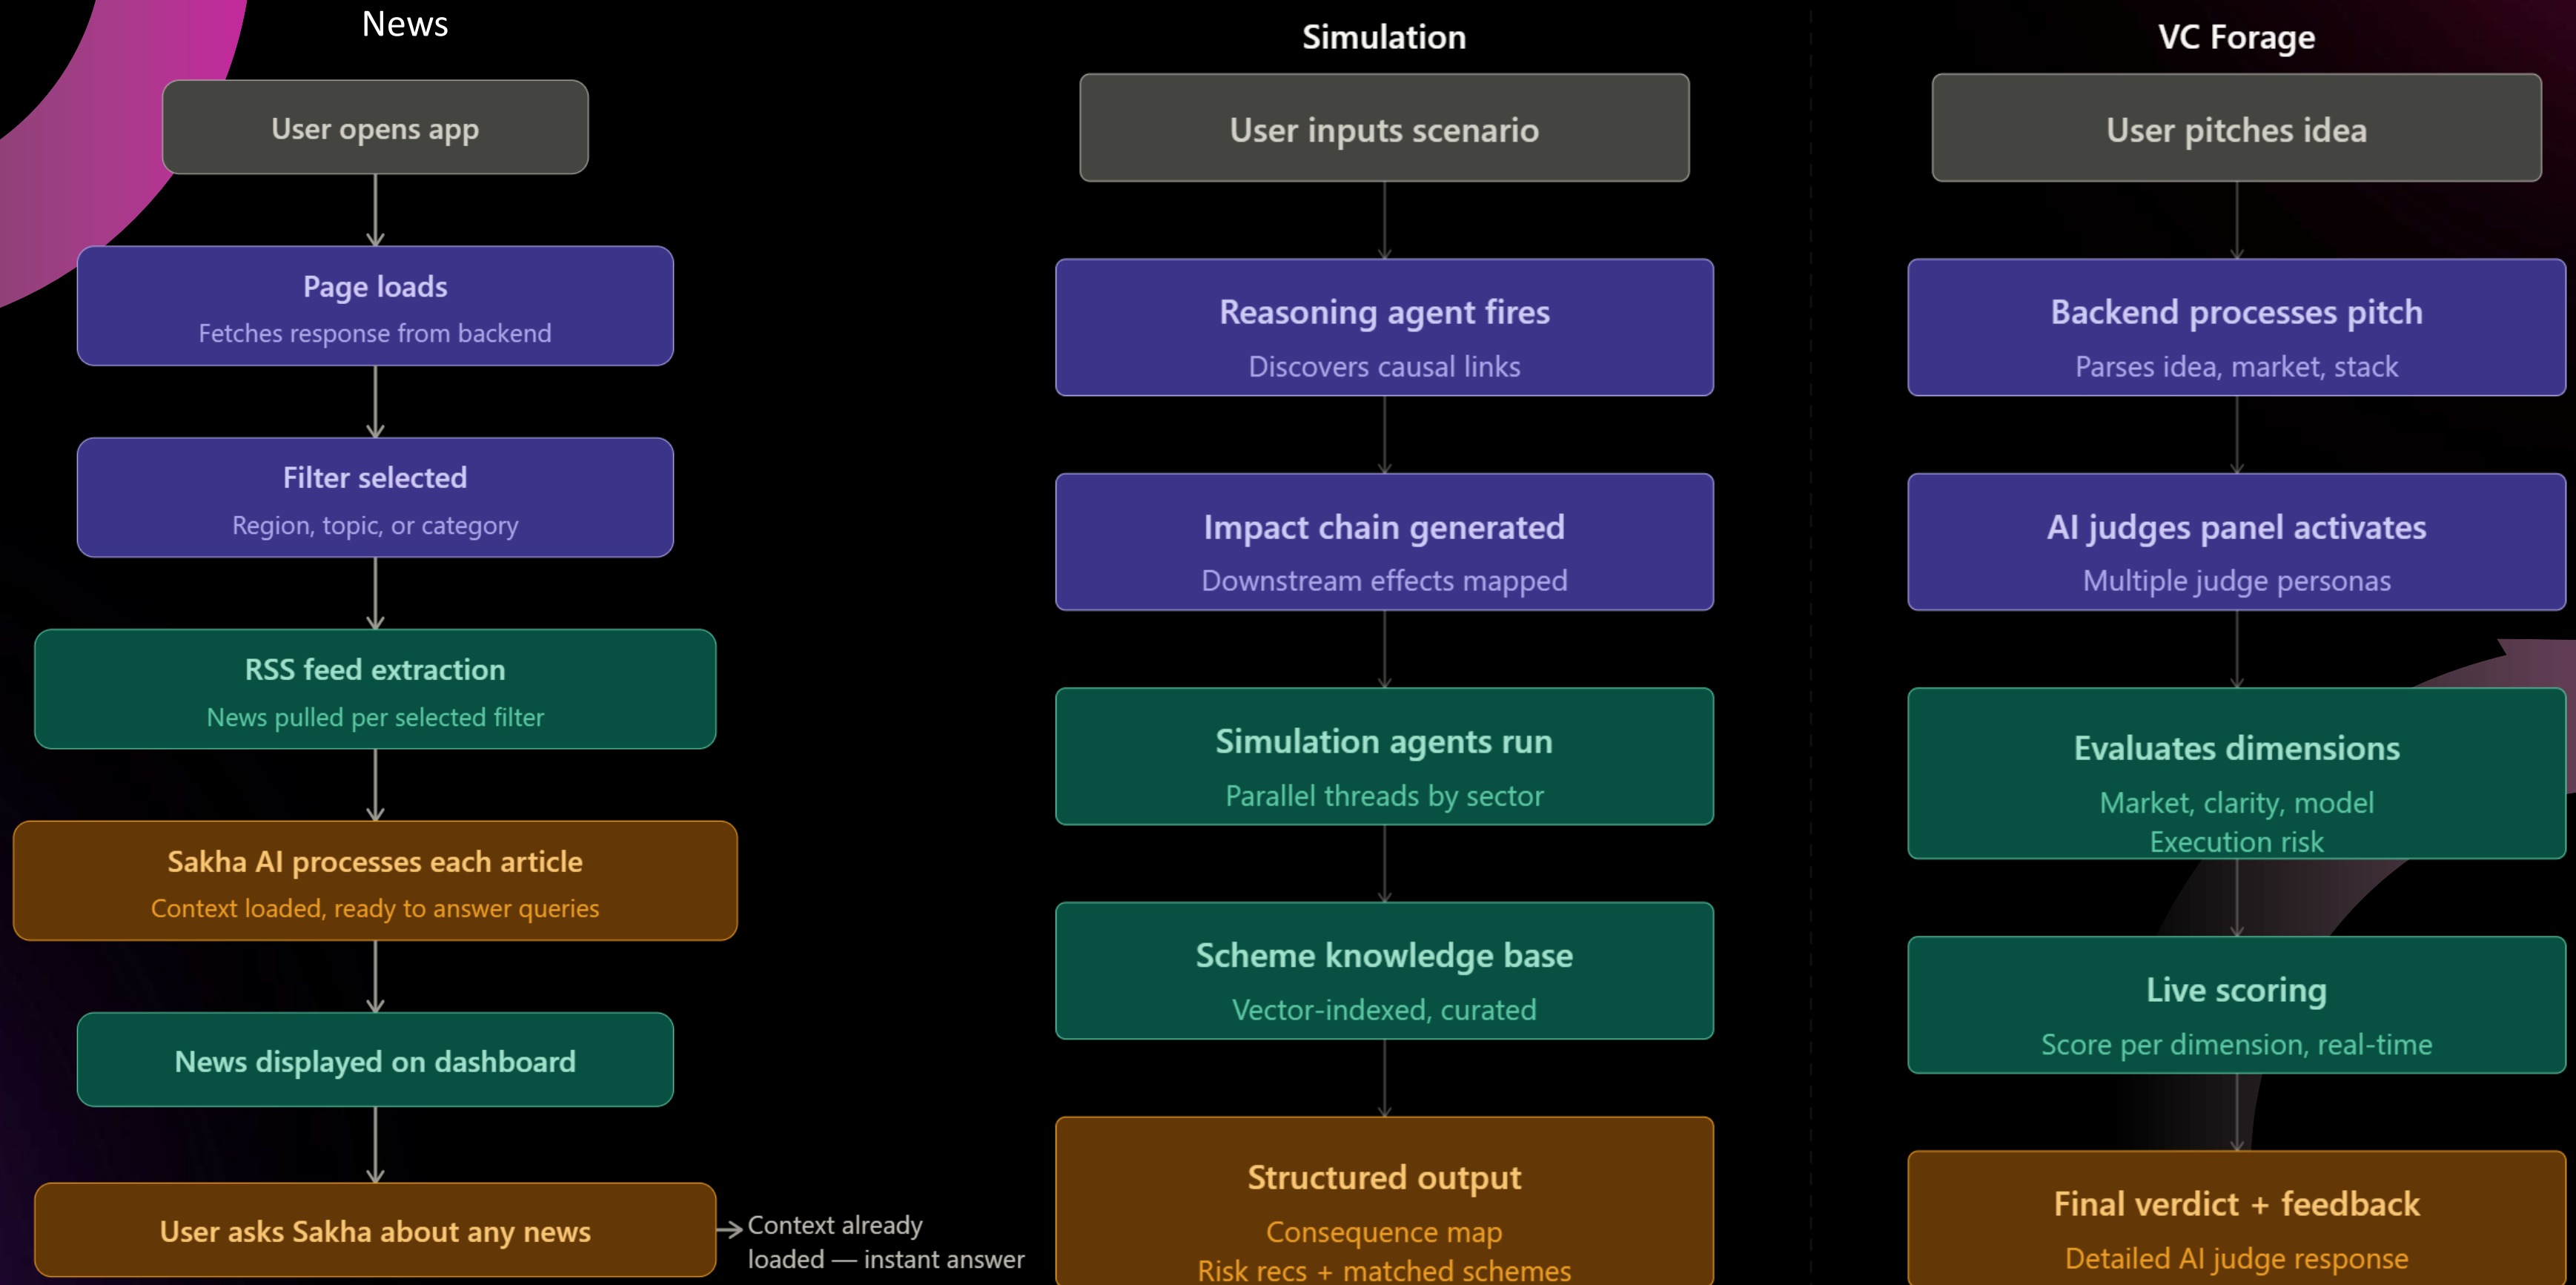

MarketMind is your Personal Economic GPS! It doesn't just show you where the road is! It warns you about the flood three turns ahead!

MarketMind is an agentic economic foresight engine that converts raw economic signals and policy changes into role-specific, consequence-aware intelligence. Instead of summarizing news, it simulates futures.

Features:

- Reasoning Agents: Multi-agent GenAI pipeline that unearths **causal links** between economic events and generates downstream impact chains fully automated, zero guesswork.
- Consequence Maps: Interactive visual timelines showing how a **single policy or market event** ripples through industries, sectors, and portfolios over time. See the flood before it hits.
- Role-Specific Intelligence: One platform. Multiple personas - Founders, Investors, MSMEs, Students, Researchers. All personalized.
- Scheme Discovery Engine: A curated, **vector-indexed knowledge base** of government and private incentive schemes matched to your profile in real time. No more hunting through fragmented portals.
- Scenario Stress-Testing: Simulation agents run thousands of scenarios per second based on your role and decision paths, benchmarked against **historical market volatility data**.

Architecture

MarketMind

Don't just read the market. Predict it.
